

Can three-dimensional ordered porous materials improve electrochemical storage of energy?

Three-dimensional ordered porous materials can improve the electrochemical storage of energy. Jing Wang and Yuping Wu from Nanjing Tech University, China and co-workers review the development of these materials for use as electrodes in devices such as batteries and supercapacitors.

Why are supercapacitors important in electrochemical storage?

These chemicals store energy in their chemical bonds, so the electrochemical synthesis of the hydrogen gas can also contribute towards electrochemical energy storage systems. After batteries, supercapacitors are considered the next most important device in the area of electrochemical storage.

How can we reduce the disposal pressure in electroplating factories?

Next, appropriate materialised treatment process is selected for high-quality utilisation of the classified sludge. This approach could customise ES to produce functional materials with higher values and reduce the disposal pressure on individual electroplating factories.

Can electroplating sludge be recycled to produce sustainable electrocatalysts?

Yuan H, Deng L, Cai X, Zheng T, Zhou S, Chen Y, Yuan Y (2016) Recycling electroplating sludge to produce sustainable electrocatalysts for the efficient conversion of carbon dioxide in a microbial electrolysis cell. *Electrochim Acta* 222:177-184

Does electroplating contribute to economic development?

Economic prosperity promotes the vigorous development of the surface treatment of metal materials. Electroplating is an effective surface treatment method for metals, which has contributed significantly to economic development in recent years (Bai et al. 2021; Matovi? et al. 2021; Yu et al. 2021).

Can electrochemical energy storage be extended to Petrochemical Synthesis and production?

However, the authors believe that with the growth of renewable energy and intermittent energy sources, the concept of electrochemical energy storage can be extended to the electrochemical synthesis and production of fuels, chemicals, petrochemicals, etc. The vision of the approach is shown in Fig. 38.1.
