

Do battery electric trucks save energy?

We model battery electric trucks that use high-power fast charging, enabling smaller batteries and showing that the economics of battery electric trucks per ton-kilometer improves with greater weight, driven by increasing load capacity as well as increased energy savings as a function of weight.

Is battery electric propulsion a viable option for long-haul heavy-duty trucks?

Nevertheless, when it comes to higher power and energy demand applications such as long-haul heavy-duty trucks, the viability of battery electric propulsion may be significantly restrained by the power-to-weight ratio of current 400 V and 800 V lithium-ion based energy storage systems.

Is a battery electric heavy-duty truck powertrain more appealing than a fuel cell?

In the present "2020" scenario, the implemented sizing methodology suggests that, from a TCO perspective, a battery electric heavy-duty truck powertrain layout may be more appealing than a fuel cell electrified propulsion system.

Are battery EVs a good option for heavy-duty trucking?

Commercial heavy-duty trucking operations are highly sensitive to operating costs⁵, which makes battery EVs an attractive option given their reduced maintenance (which minimizes costs and downtime) and lower fuel costs from higher power-train efficiencies and cheap electricity^{6,7,8}.

Are fuel cell trucks a viable alternative to battery electric trucks?

Assessing economic viability of fuel cell trucks against battery electric trucks. Fuel cell entails reduction in truck weight, battery pack capacity and retail price. Right-sizing considering 2020-, 2030- and 2050-oriented cost scenarios. Fuel cell electrified propulsion may currently represent a promising option for long-haul heavy-duty trucks.

Are heavy battery electric trucks infeasible?

Research on the decarbonization of transport often concludes that heavy battery electric trucks are infeasible due to the incompatibility of long driving distance with high energy use and low specific energy and high costs of batteries.
