

A high capacitance of  $123 \text{ F g}^{-1}$ ; at  $0.1 \text{ A g}^{-1}$ ; and an impressive capacitance retention of  $105 \text{ F g}^{-1}$ ; at  $10 \text{ A g}^{-1}$ ; were achieved with  $1 \text{ M KCl}$  electrolytes, demonstrating the ...

a large maximum polarization ( $P_m$ ), a small remnant polarization ( $P_r$ ), and a high breakdown electric field ( $E_b$ ) is essential for attaining a substantial density of recoverable ...

In this well-established "high"-voltage and high-rate anode, the capacity of  $1\text{-}\mu\text{m}$  particles from solid-state synthesis reaches only  $60\text{--}65 \text{ mA h g}^{-1}$  at a rate 4 of  $10\text{C}$ , where ...

Development of photoactive chemical heat storage (PCHS) materials that can be isomerized without ultraviolet light and have outstanding storage performance as well as high rate heat ...

This high-rate, high-efficiency cell has a 95% round-trip energy efficiency when cycled at a  $5\text{C}$  rate, and a 79% energy efficiency at  $50\text{C}$ . It also has zero-capacity loss after ...

High-energy and light-actuated phase change composite for solar energy storage and heat release ... phase change materials (PCMs) have attracted much attentions due to the ...

This review provides a comprehensive overview of the progress in light-material interactions (LMIs), focusing on lasers and flash lights for energy conversion and storage ...

The energy density of the traditional lithium-ion battery technology is now close to the bottleneck, and there is limited room for further optimization. Now scientists are working on designing new ...

However, there is a need to store this abundant energy and, in many instances, supply that energy at a high rate. With large expense and efficiency losses in integration ...
