

Reprinted with permission from Ref. [24]. 2020, Elsevier. from publication: A Review on Hollow Fiber Membrane Contactors for Carbon Capture: Recent Advances and Future Challenges | Energy need is ...

There are also few reports on the use of hollow fiber membranes as the support materials for the preparation of phase change energy storage materials. Hollow fiber membranes have the advantages of stable ...

novel, self-sustained hollow fiber membrane reactor running at <450 °C. The technology, if successful, is expected to solve H₂ transportation and storage problems by using NH₃ as ...

The phase change energy storage materials with three different support layers were successfully prepared and various properties were systematically characterized. There ...

The low electrical conductivity of electrospun nanofibers, coming from the otherness of spinning solution and the lower degree of fiber orientation, is the major stumbling ...

Flexible shape-stabilized composite phase change materials (ss-CPCMs) have a wide range of potential applications because they can be woven into desired shapes. In this work, a series of ...
