

What is a home energy storage system?

Most home energy storage systems provide partial backup power during outages. These smaller systems support critical loads, like the refrigerator, internet, and some lights. Whole-home setups allow you to maintain normal energy consumption levels--but at a cost.

Why should you choose a home energy storage system?

With independence from the utility grid, you can avoid the inconvenience of outages without sacrificing your daily routines. Most home energy storage systems provide partial backup power during outages. These smaller systems support critical loads, like the refrigerator, internet, and some lights.

How many kWh does a battery backup system store?

Comparatively, partial-home battery backup systems usually store around 10 to 15 kWh. Given that power outages are infrequent in most parts of the country, a partial-home battery backup system is generally all you'll need. But, if your utility isn't always reliable for power, whole-home battery backup may be the way to go.

What is a flex energy storage system?

The Flex Energy Storage System is marketed as a "solar generator" alternative to traditional standby generators. It's explicitly designed for backup power and doesn't feed excess solar power back to the grid. The system comes in 5-10 kWh capacities and includes solar panels in the installation package.

How much do energy storage batteries cost?

On average, energy storage batteries cost around \$1000 per kWh installed. Our solar and battery calculator will help give you a clearer insight into the cost of the most popular battery systems. Most hybrid (battery storage) inverters can provide emergency backup power for simple appliances like lights, fridges and TVs.

Do solar power systems have backup storage?

Solar power systems with backup storage give you highly dependable power in emergency situations. In 2022, a Lawrence Berkeley National Laboratory study found battery backup power could be reliable in most areas of the US for most times of the year during a long-term grid outage.
