What is CO2 storage technology?

Cite this: Energy Fuels 2024, 38, 8, 7108-7120 The storage technology of carbon dioxide is an important part of the carbon capture, utilization, and storage (CCUS) process. This study employed Aspen series software to simulate and analyze the CO 2 storage unit of a CCUS project with an annual capacity of one million tons.

Is carbon dioxide a good energy storage system?

In conclusion, as compared to air, carbon dioxide has several distinct benefits as an energy storage system. Pumps, rather than compressors, may be applied to enhance storage pressure since it has a higher dew point temperature and is easier to condense than air.

How does a carbon dioxide energy storage system work?

Zhang et al.47 proposed a carbon dioxide energy storage system that combines underground strata of different depths, as illustrated in Fig. 7. The system maintains the temperature of carbon dioxide relatively constant based on the temperature characteristics of rock strata at various depths.

What is compressed carbon dioxide energy storage (CCES)?

They are now characterized as large-scale, long-lifetime and cost-effective energy storage systems. Compressed Carbon Dioxide Energy Storage (CCES) systems are based on the same technology but operate with CO 2 as working fluid. They allow liquid storage under non-extreme temperature conditions.

How does carbon dioxide change during the energy storage process?

During the energy storage process, carbon dioxide is gradually compressed, and the working fluid state changes from transcritical to supercritical; during the energy release process, carbon dioxide is gradually expanded, and the working fluid state changes from supercritical to transcritical.

Why is it easier to capture CO2 from a gas?

From an engineering perspective, it is easier to capture carbon from a gas with a higher concentration of CO 2 because more molecules of carbon dioxide are flowing past the scrubbers. Grabbing even more CO 2 once most of it is gone requires larger equipment, more time, more energy, and a bigger investment.
