

How to calculate the energy storage rental price

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

How do you convert kWh costs to kW costs?

The \$/kWh costs we report can be converted to \$/kW costs simply by multiplying by the duration (e.g., a \$300/kWh, 4-hour battery would have a power capacity cost of \$1200/kW). To develop cost projections, storage costs were normalized to their 2020 value such that each projection started with a value of 1 in 2020.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Why do we need a low-priced energy storage system?

Storing low-priced energy from the grid and directly from renewable energy generation means that there is more energy output from the renewable energy plus storage system than could be delivered if only energy from renewable energy generation is stored.

Should we add storage to renewables generation?

Consequently, the financial merits of adding storage to renewables generation, the incremental benefit is compared to incremental cost (to add storage). The generic benefit estimate for Renewables Capacity Firming ranges from \$709/kW to \$915/kW (over 10 years).

Should a storage project be paired with a solar or wind power project?

Pairing a storage project with a solar or wind power generation project could allow projects to charge the storage system rather than deliver power to the grid when market prices for electricity are low (or negative) or when electricity that would otherwise be delivered to the interconnection point would be curtailed.
