

How to choose a hydraulic accumulator?

Determine the key parameters for selecting the optimal hydraulic accumulator for your field of application in just a few clicks. Our online tool ASPlight calculates the required variables, such as accumulator volume, pressure ratio and maximum and minimum operating pressures, taking into account real gas behaviour.

What is a hydraulic accumulator?

Most modern, fluid power systems include hydraulic accumulators that use compressed nitrogen gas and a piston, bladder, or diaphragm that separates the compressed gas from the hydraulic fluid. Piston accumulators have an outer cylinder tube, end caps, a piston element, and sealing system.

How do I find the right hydraulic accumulator?

Our online tool ASPlight calculates the required variables, such as accumulator volume, pressure ratio and maximum and minimum operating pressures, taking into account real gas behaviour. With ASPlight, you can find the right hydraulic accumulator quickly and reliably in just a few steps.

How does an accumulator work?

The accumulator bladder or piston compresses and moves gas volume when the fluid pressure overtakes the pre-charge pressure. This creates the energy source. When the gas pressures balance with the system, the action stops and the system restarts the charging cycle. How does an accumulator work in hydraulics?

What factors should be considered when selecting a hydraulic accumulator?

The accumulator has discharged its design maximum volume of fluid back into the system. When selecting an accumulator for a particular application, both hydraulic system and accumulator performance criteria should be considered. To ensure long and satisfactory service life, the following factors should be taken into account:

Can a hydraulic accumulator be installed horizontally?

Normally, hydraulic accumulators are installed vertically, with the hydraulic port down. Mounting a bladder-style device horizontally can result in accelerated bladder wear if the bladder rubs against the shell while floating on the hydraulic fluid.
