

I'm putting together an 18650 battery pack for an e-bike. The BMS is specified for 10s 36v 40a. I want to avoid soldering, spot-welding, or an end cap kit if possible. I thought I ...

Kind of my gut instinct as well. My dilemma is right now part of the trim is attached to the frame and directly to the brick. To recreate this, part of the Azek would be attached to the ...

If there's a battery, remove battery with board unplugged for a good 5 minutes, then boot without the battery see if the cmos will be clear. If you get a screen, you power down again, reinsert ...
