

Should I upgrade my internal hard drive to an SSD?

In short, while upgrading the 1TB internal hard drive on your computer to an SSD is cost effective, the same may not be true for replacing larger capacity drives, like those used in external drives, unless the increased speed is worth the increased cost. Whether your computer can use an SSD is another question.

How do I upgrade a hard drive or SSD?

Follow these steps to upgrade a hard drive or SSD in your computer. Upgrade an existing drive. Replace an existing drive. Install an additional drive. It may seem the best option is to upgrade the existing drive in the computer. Unfortunately, upgrading a drive is not possible without also purchasing a drive duplicator.

Do I need a hard drive upgrade?

M.2 drives are another form factor to consider, but you need to check if your PC supports them. M.2 drives are the fastest SSDs available, and use the PCIe bus to transfer data. A hard drive upgrade is one of the easiest ways to improve your PC, whether you're looking for more storage or the speed boost an SSD provides.
