

# How to use bluetooth energy storage power supply

Can the victron blue smart charger be used as a power supply?

Power supply function The Victron Blue Smart Charger range are also suitable for use as a DC power supply, to power equipment without a battery connected (or while also connected to a battery). While it's still possible to use the charger as a power supply without changing any settings, a dedicated 'Power supply' mode exists for this purpose/usage.

How do I set up a blue smart charger?

Enable Bluetooth on the mobile phone or tablet (if not already enabled). Open the VictronConnect app and look for the Blue Smart Charger in the LOCAL page, if it doesn't automatically appear perform a scan for devices in range by selecting the 'scan' button (round orange button with circular arrow) in the bottom right corner.

How does the Blue smart charger work?

The Blue Smart Charger range will attempt to recharge a severely discharged battery (even down to 0V) with low current and then resume normal charging once the battery voltage has risen sufficiently - many other chargers will not recognise a battery in this state.

How much power does a Bluetooth device use?

The power usage can vary significantly based on the Bluetooth connection settings, like connection interval and connection event length. However, it might be in a similar range to the advertising state, perhaps around 5 mA to 30 mA (give or take a few mA) during active communication.

How do I set up a blue smart IP22 Charger?

Using a Bluetooth enabled device (such as a mobile phone or tablet), open the VictronConnect app and locate the first Blue Smart IP22 Charger in the 'LOCAL' page device list, then connect to the device (default Bluetooth PIN code is 000000). Select the 'Setting' icon (gear in the top right corner) to access the 'Settings' page.

Why should you choose blue smart charger?

The Blue Smart Charger range is up to ~95% efficient; resulting in lower power usage, less heat generated and cooler operation. Protection against ingress of dust and water/liquid Charger operation is totally silent: there is no cooling fan or moving parts.

There are three ways to minimize power consumption: Choose the right hardware components - including the battery. Optimize the firmware via static configurations (such as peripheral bus speeds and pin configurations)
