

What is business model analysis for the hydrogen energy sector?

This chapter explores business model analysis for the hydrogen energy sector. Hydrogen energy businesses are characterized from an economical viewpoint, as a large-scale capital-intensive business sector dealing with a commodity where long-term perspectives and...

What is a hydrogen energy business?

Hydrogen energy businesses are characterized from an economical viewpoint, as a large-scale capital-intensive business sector dealing with a commodity where long-term perspectives and governmental support are needed. Case studies are then described using a business model for hydrogen infrastructure for FCVs.

Can business models help the Clean Hydrogen Economy?

In Catalyzing the Clean Hydrogen Economy Using Business Model Innovation, we highlight 13 innovative business model solutions that the private sector can use to reduce risk, alleviate first-mover concerns, and help the clean hydrogen economy gain traction. Here, we detail five of those business models that could have the greatest near-term impact:

What is a hydrogen-as-a-service (Haas) business model?

Under a Hydrogen-as-a-Service (HaaS) business model, the seller provides hydrogen storage and refueling infrastructure (and in some cases vehicle retrofits) at no cost to an end user in the hydrogen mobility space. In return, the end user signs an agreement to purchase hydrogen from the seller, usually for several years.

What are the characteristics of energy related businesses who work with hydrogen?

Here the characteristics of energy related businesses who work with hydrogen are explained. Every field of business has a characteristic profile. For example, smartphone apps have a very low entry barrier, and products developed by non-experts can make enormous impact in the market.

Can a business model solve a problem in the hydrogen industry?

Deloitte's research finds innovative, real-life business model solutions that can help address these uncertainties. Some are present in the hydrogen industry today; others come from more mature energy industries that relied on business model innovation when they were in nascent stages of their own.
