

How much hydrogen can be stored in a GKN fuel cell?

Up to 500 kilograms of hydrogen can be stored in GKN Hydrogen's storage system in a solid state by binding the molecules in a metal hydride at low pressure without the need for compression. The hydrogen can then be used in an on-site fuel cell to create zero-emissions electricity.

Can hydrogen be used to create zero-emissions electricity?

The hydrogen can then be used in an on-site fuel cell to create zero-emissions electricity. "We believe that hydrogen has the potential to revolutionize the energy sector, and our solutions are designed to make this transition as seamless as possible," said Jim Petrecky, chief operating officer at GKN Hydrogen.

Could solid-state storage help accelerate the transition to a net-zero emissions economy?

The project also aims to identify the most beneficial uses of solid-state storage of clean renewable hydrogen. At scale, this technology could help accelerate the transition to a net-zero emissions economy by increasing the availability of resilient, on-site renewable power generation and storage.
