How reliable are solar panels?

Solar panels convert the light from the sun into electricity, with no moving parts they are very reliable a 30 year life is realistic, that means with payback averaged at 9 years, you can have 21 years of free electricity! Even on a bright Manx winters day a panel can generate a considerable amount of electricity (perhaps 30% of capacity).

Do solar panels need to be south facing?

Solar panels need to be south facing for maximum exposure. Is your property surrounded by trees or buildings that may cast a shadow over solar panels - this can significantly reduce the amount of electricity generated. And, of course, is your roof structurally sound? Not only will it have to support the solar panels but also the fixing frames.

Are solar panels virtual?

Here is an example, the solar panels are virtual: STEP 4 Installation, our team consists of qualified roofers, capable of re-roofs if required and qualified electricians, this property had slates replace the concrete tiles at the same time as solar panel installation. The end result looks great, we are proud of the end quality:

There are two types of inverters that may be installed as part of a rooftop solar system. A string inverter takes direct current (DC) power output from all the panels and converts it to alternating current (AC) in one central location. String inverters usually last between 10-15 years and may need to be replaced during the lifetime of the panels.
