

Is Finland energy efficient?

On an international scale, energy production and usage in Finland are efficient. Energy-intensive industries have long played a large role in the Finnish economy, spurring the development of efficiency-driven energy systems. Finland is a world leader in smart grid technology.

What is the role of energy transformation in Finland?

How is energy used in Finland? Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What type of energy is used in Finland?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Finland: How much of the country's energy comes from nuclear power?

What is Finland's energy consumption?

Finland's per capita energy consumption is notably high, driven by its heavy industry sector and significant heating requirements due to its cold climate. In 2021, the industrial sector was the primary consumer of energy, accounting for 52% of Total Final Consumption (TFC)--above the International Energy Agency (IEA) average of 36%.

What is Finland's energy supply in 2021?

In 2021, Finland's Total Energy Supply (TES) comprised bioenergy and waste (33.6%), oil (20.8%), nuclear (18.5%), coal (6.3%), natural gas (6.4%), electricity imports (4.6%), hydro (4.1%), peat (2.7%), wind (2.2%), and heat (0.6%).

How did Finland's energy mix change from 2011 to 2021?

From 2011 to 2021, Finland experienced a significant shift in its energy mix. The share of fossil fuels in Total Energy Supply (TES) declined from 53% to 36%, with decreases seen across all types: oil (26% to 21%), natural gas (9.6% to 6.4%), and coal (11% to 6.3%). Peat's contribution to TES also decreased from 5.8% to 2.7%.
