

How could batteries be used in the military?

Operationally, the military could recharge batteries or make hydrogen using electrolyzers at contingency bases, which would reduce round-the-world resupply logistics and casualties. Batteries could be made swappable across vehicles, allowing for the cross-leveling of energy on the battlefield.

What are the benefits of a versatile battery system?

Dual Benefit: By leveraging military investment, a versatile battery system would be developed providing a significant improvement in overall capability for military and commercial applications. Furthermore, by developing commercial market overall systems costs would be reduced.

Can Li-ion 6T batteries be used for military transportation?

Based on this approach, we will seek to gain approval for Naval transportation of Li-ion 6T batteries. (This approach will also be implemented as we develop modular high voltage battery systems to support advanced platform electrification.) Used two common military rifle calibers (AP and API types).

What are the benefits of a standardized battery?

DOE Benefit: With minimal investment, DOE will leverage standardized batteries in support of anti-idling and start/stop applications for commercial truck and vehicle applications. (replaces 2 LA 6T!) Gen1 TRL 5/6 testing underway.

What are the benefits of Gen 1 6T batteries?

Additionally, Gen 1 6T batteries provide the following benefits: reduced weight, reduced volume (2 for 1 replacement 24V vs. 12V), reduced logistics & sustainment burden, increased cycle life, and advanced battery management with state of charge and state of health indicators.

Is battery technology capped?

Battery technology in (a) is not capped, and results show what would be required for all four vehicle characteristics to be met. HFC technology in (b) is capped at literature-cited future feasible values for hydrogen storage (21,000 Wh kg⁻¹ and 1700 Wh L⁻¹) and fuel cell stacks (8000 W kg⁻¹ and 850 W L⁻¹).
