

What is thermal energy storage?

Thermal energy storage is used particularly in buildings and industrial processes. It involves storing excess energy- typically surplus energy from renewable sources,or waste heat - to be used later for heating,cooling or power generation. Liquids - such as water - or solid material - such as sand or rocks - can store thermal energy.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

How can energy storage help the electric grid?

Three distinct yet interlinked dimensions can illustrate energy storage's expanding role in the current and future electric grid--renewable energy integration,grid optimization, and electrification and decentralization support.

How can a community resiliency energy storage program be integrated?

Integrate energy storage in microgrids and community-based solutions: A community resiliency energy storage program could be integrated into utilities' IRP processes,which can focus on identifying and serving customers' needs and addressing their energy vulnerabilities.

Why is energy storage important?

Energy storage is a potential substitute for,or complement to,almost every aspect of a power system,including generation,transmission, and demand flexibility. Storage should be co-optimized with clean generation,transmission systems, and strategies to reward consumers for making their electricity use more flexible.

How many MWh can a thermal energy storage system store?

The baseline system is designed for economical storage of up to a staggering 26,000 MWh of thermal energy. With modular design,storage capacity can be scaled up or down with relative ease.

Kate Hardin leads Deloitte's research team focused on the implications of the energy transition for the industrial, oil, gas, and power sectors and has an experience of more than 25 years in the ...
