

Is energy storage a good investment?

Energy storage is an attractive emerging high-growth sector. It's still wide open with many upcoming companies. The market has seen more pure energy storage players coming online with different technologies. These are often high-risk, high-reward investments. ESS (energy storage solutions) offers a compelling new segment in renewable energy.

Which energy storage stocks are a good investment?

Albemarle is the top holding, followed by Tesla, so if you can't decide from the previous stocks, this fund is a good one-stop investment to play the pending energy storage boom. With more than \$1 billion under management and about 60 components, this First Trust fund is another interesting and diversified way to play energy storage.

What is the iShares energy storage & materials ETF?

The iShares Energy Storage & Materials ETF (the "Fund") seeks to track the investment results of an index composed of U.S. and non-U.S. companies involved in energy storage solutions aiming to support the transition to a low-carbon economy, including hydrogen, fuel cells and batteries.

What are the future opportunities for energy storage?

Energy storage is a fast-emerging sector. Pumped hydro is the most used solution for now. Batteries are the next step to support renewable energy. Lithium technologies lead the way, but many upcoming technologies have different benefits. I provide an overview of possible opportunities.

Which countries invest in battery energy storage in 2022?

Grid-scale battery storage investment has picked up in advanced economies and China, while pumped-storage hydropower investment is taking place mostly in China. Global investment in battery energy storage exceeded USD20 billion in 2022, predominantly in grid-scale deployment, which represented more than 65% of total spending in 2022.

Will battery energy storage investment hit a record high in 2023?

After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD35 billion in 2023, based on the existing pipeline of projects and new capacity targets set by governments.
