

Iraqi enterprise energy storage power station

Where in Iraq will new electricity transmission substations be built?

By next summer, Basra, Amara, Dywania, Kut, Hilla, Nassriya and other areas in Iraq, will house new electricity transmission substations that will bring reliable power to millions of people and help industries grow. Vice President, Grid Stabilization, Siemens Energy Middle East.

How will substations affect Iraq's power infrastructure?

The substations will strengthen the country's power infrastructure as part of an agreed roadmap for the electrification of the New Iraq. When fully commissioned, the substations will help to deliver enough power to the national grid equivalent to the electricity needs of more than two million citizens.

How has war affected Iraq's power infrastructure?

Despite the extraordinary challenges of war in recent years, Iraq has made impressive gains, nearly doubling the country's oil production over the past decade. But the turmoil has also undermined the country's ability to maintain and invest in its power infrastructure.

Why did the Iraqi government get a follow-up order from Siemens Energy?

Customer satisfaction with the Siemens Energy products and the joint project execution of the Dresden factory as well as the Siemens Energy team located in Erlangen, Abu Dhabi and Iraq paved the way for a follow-up order by the Iraqi government for the Al Hamudhia (north-west of Baghdad) region. It includes the supply of 10 additional transformers.

Will Iraq's oil production increase if water availability increases?

One impeding barrier is the availability of water, as planned oil production will require a level of water production above what has been achieved so far. Assuming an increase in water availability, Iraq's production to 2030 grows by around 1.3 mb/d, making it the third largest contributor to global oil supply in that time.

How much oil does Iraq produce a day?

It also takes a detailed look at the country's oil and gas sector, projecting that Iraq's oil production will grow by 1.3 million barrels a day by 2030, becoming the world's fourth-largest oil producer behind the United States, Saudi Arabia and Russia.

There are a number of pathways available for the future of electricity supply in Iraq but the most affordable, reliable and sustainable path requires cutting network losses by half at least, strengthening regional interconnections, ...
