

Why did Jianlin choose materials science?

Jianlin had a fascination for energy systems growing up, and a knack for chemistry, math and physics. He decided to combine those fields and pursue materials science, earning his bachelor's and master's degrees from the University of Science and Technology of China.

How many energy storage projects are there in China?

In 2016, our centre established a joint energy-storage research laboratory with the Beijing-based State Grid Corporation of China, which operates the country's electricity network. We now have six completed research projects related to energy conversion and storage. A seventh, secured during lockdown, is in progress.

What are ancillary service business models for energy storage in China?

There are three types of ancillary service business models for energy storage in China. As shown in Fig. 2, the first is the power generation company investment model. Power generation companies use existing funds or bank loans to build and operate energy storage through energy storage operating companies.

What is energy storage ancillary service profit?

The energy storage ancillary service profit is 200  $\times 10^4$  /kWh, and the lease fee is 330  $\times 10^4$  /kWh, and the priority power generation incentive is 16 million  $\times 10^4$  /year . 3.6. Shared energy storage model Shared energy storage is a new energy storage business model under the background of carbon peaking and carbon neutrality goals.

Does independent energy storage have a preferential power generation incentive system?

In addition, independent energy storage also has a preferential power generation incentive system. In December 2021, the Haiyang 101 MW/202MWh energy storage power station project putted into operation, and energy storage participated in the market model of peak regulation application ancillary services.

Are large-scale battery storage facilities a solution to energy storage?

Large-scale battery storage facilities are increasingly being used as a solution to the problem of energy storage. The Internet of Things (IoT)-connected digitalized battery storage solutions are able to store and dynamically distribute energy as needed, either locally or from a centralized distribution hub.
