

Which energy sources are used in Latvia?

Latvia has underground gas storage facilities at the Inčukalna UGS, with a capacity of 4.47 billion m³. Natural gas companies include Latvijas Gāze. Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources.

What is Latvia's energy demand?

Latvia's energy demand is dominated by an ageing building stock, which accounts for nearly half of total final consumption, with residential buildings alone accounting for a third of total consumption.

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

What are the different types of energy transformation in Latvia?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Latvia for 2022. Another important form of transformation is the generation of electricity.

What is the main renewable resource in Latvia?

The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into consideration the fact that Latvia cannot offer big subsidies in order to attract investment.

Should energy transition strategies be coordinated across Baltic states?

Latvia's energy system is closely tied with its neighbours, meaning energy transition strategies will need to be well coordinated across the Baltic states, the report notes.

Lambda Energy began collecting oil from either side of the discharge location via pre-installed risers connected to the pipeline. This operation continued until enough oil had been removed from the pipeline to reduce the head pressure on the discharge point. An estimated 4,000 barrels was collected using vac trucks and transported to storage ...

Latvia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
