

Do shopping malls need energy storage systems?

Usually, shopping malls are connected to the medium voltage (MV) grid and benefits of discounted and advantageous tariffs. However, they may vary considerably from country to country. The transition from fossil fuels to low-carbon technologies, mainly through RES generation, might require a wide utilization of energy storage systems (ESS).

Are shopping malls the future of energy management?

Shopping malls and similar venues present attractive, big-time opportunities as potential sites for grid-connected solar power, energy storage and intelligent, highly energy-efficient facilities management.

Do shopping malls need solar energy?

1. Energy Consumption Assessment: Shopping malls are dynamic spaces with diverse energy needs. Before implementing a solar energy system, conduct a thorough assessment of the mall's energy consumption patterns. Consider peak hours, seasonal variations, and specific energy-intensive areas such as lighting, HVAC systems, and escalators.

Can a shopping mall support the transition from fossil fuel to low carbon?

We will show how the shopping mall can support the transition from fossil fuel to low carbon generation, through the combination of (i) retrofitting solutions to decrease the energy demand, and (ii) the use of on-site renewable energy and (iii) the flexibility provided by energy storage.

How much energy does a shopping mall consume?

The European average energy consumption is estimated with a value of 272 kWh/m² GLA in 2014 with a predominance of electricity and natural gas energy carriers, as shown in (Bointner et al., 2014). A shopping mall can be generally considered as an "icon of consumerism," not only for retail activities, but also in terms of energy consumption.

Are shopping malls sustainable?

The sustainability aspects of the retail sector may thus significantly contribute toward ambitious environmental and energy targets. Shopping malls (or shopping centers) are a flagship category within commercial buildings with a great potential for energy efficiency improvement.
