

What does solar power plant mean?

"Solar power plant" redirects here. For list of solar thermal stations, see List of solar thermal power stations. A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected photovoltaic power system (PV system) designed for the supply of merchant power.

How to design a large-scale PV power plant?

Designing a large-scale PV power plant requires infrastructure that can handle such an installation. For instance, the location must be selected carefully to avoid shading from buildings, trees, or other obstructions.

What is the world's largest solar power plant?

Sweihan Power Project 938 MW (0) This 938 MW AC plant in Abu Dhabi in the UAE became the world's largest single solar power station when commissioned in June 2019 - a position it held for 15 months.

What land is used for PV power stations?

The land used for PV power stations includes gobi (left), grassland (top), water bodies (right), mountain land (bottom), etc. As for PV power station mapping, previous methods mainly focused on field survey and visual inspection, where manual annotation was performed to delineate the locations or boundaries based on the remote sensing imagery.

What is the difference between 0 & 1 in a PV power station map?

Meanwhile, only two kinds of values are in the PV power station map, where 0 stands for the non-PV regions while 1 represents the PV power stations. In addition, the provided PV dataset could be loaded into GIS software such as ArcGIS and QGIS for data visualization and spatial analysis.

How many ground-mounted PV power stations are there in China?

According to our dataset, China has a total of 2467.7 km² ground-mounted PV power stations in 2020. The top three largest provinces refer to Xinjiang, Inner Mongolia and Qinghai, whose PV area ratio are 14.92%, 12.49% and 11.26%, respectively, with a total of nearly 40% of all the PV power stations of China.
