Layered energy storage

Supercapacitors (SCs), also known as electrochemical capacitors, represent an innovative electrochemical energy storage system, bridging the gap between conventional physical capacitors and batteries. The ...

Layered double hydroxides (LDHs) are a family of two-dimensional (2D) layered materials with controllable supramolecular structure and unique physicochemical properties, ...

1 Introduction. Energy conversion and storage have become global concerns with the growing energy demand. 1 Layer structured materials, with crystal structures similar to that of graphite (i.e., weak van der Waals ...

2 ???· The pursuit of advanced sodium-ion batteries (SIBs) has been intensified due to the escalating demand for sustainable energy storage solutions. A W-doped P2-type layered ...

Layered oxides were first applied in energy storage by J. B. Goodenough in 1980; 25 substantial efforts have since advanced the development of high-performance MLO materials for various ...

Sodium-ion batteries (SIBs) reflect a strategic move for scalable and sustainable energy storage. The focus on high-entropy (HE) cathode materials, particularly layered oxides, has ignited scientific interest due to the ...

$Ti_3C_2T_x$, a typical representative among the emerging family of 2D layered transition metal carbides and/or nitrides referred to as MXenes, has exhibited multiple advantages including ...

Sodium-ion batteries (SIBs) reflect a strategic move for scalable and sustainable energy storage. The focus on high-entropy (HE) cathode materials, particularly layered oxides, ...

There is a wide variety of layered polymer-based energy storage dielectrics, including those constructed by doping with inorganic nanofillers (Figure 4c), heterogeneous all-organic ...

In this work, we reported a facile one-pot solvothermal procedure in synthesizing three-dimensional cobalt/nickel layered double hydroxides for energy storage materials. By ...
