Are underground reservoirs suitable for large-scale energy storage?

The underground reservoirs for large scale energy storage are described. An extensive review of the criteria for site screening underground reservoirs is done. Large-scale underground energy storage technologies and reservoir types are matched. General criteria to all reservoir types are assessed.

How a reservoir can be used to store energy?

A reservoir made in a porous and permeable underground formation can be used to store Natural Gas,CO 2,Air,Hydrogen or even Thermal Energy. Storage of an energy carrying fluid requires a phase of compression and injection in gaseous state into the reservoir: the free-phase gas pushes the formation water away from the injection wells.

Can geological reservoirs be used for energy storage?

Electric energy storage technologies, involving the use of geological reservoirs offer large storage capacities and discharge rates [6], bringing all the advantages of a large-scale energy storage system while minimising environmental and social impacts, and the need for surface space.

Will pumped storage contribute to new hydropower capacity in China?

In China, pumped storage will also account for more than half of new hydropower capacity annually between 2023 and 2025. China, Asia Pacific and Europe are leading on the installation of new hydropower capacity.

Is pumped hydroelectric storage a good choice for large-scale energy storage?

Its ability to store massive amounts of energy per unit volume or mass makes it an ideal candidatefor large-scale energy storage applications. The graph shows that pumped hydroelectric storage exceeds other storage systems in terms of energy and power density.

What are potential storage reservoir sites in the geological underground?

Potential storage reservoir sites in the geological underground mainly comprise salt caverns, saline aquifers, depleted hydrocarbon reservoirs and rock caverns. Adapted from [22]. Essentially, a geological reservoir is prepared prior to injection, to effectively create an underground, pressurised storage container.
