Is Subsea energy storage a viable alternative to floating onboard energy storage?

Subsea energy storage is an emerging and promising alternative to conventional floating onboard energy storage. In this review, various potential subsea electricity and hydrogen energy storage solutions for 'floating offshore wind + hydrogen' are examined and compared.

Is subsea battery energy storage a viable solution for offshore wind farms?

For floating offshore wind farms, it will be safer if the medium- and large-scale battery energy storage systems can be deployed far from the wind turbines and offshore platforms. Subsea battery energy storage is one such promising solution.

Is Subsea energy storage a good investment?

After all, high security and reliability are the baseline of energy storage in 'floating offshore wind + hydrogen' systems. Second, additional space is necessary if the scale of the energy storage system is very large, thereby lifting the investment. In contrast, these challenges could be avoided by subsea energy storage.

What are the future directions of marine energy storage systems?

Further, we summarize the eco-marine power system, and the future directions of marine energy storage systems are highlighted, followed by advanced AI-battery technology and marine energy storage industry outlooks up to 2025. 1. Introduction

Is subsea pumped hydro energy storage feasible?

Overall, the feasibility of subsea pumped hydro energy storage has been demonstrated. Many challenges remain for the full-scale demonstration, such as electro-mechanical equipment integration, offshore deployment, and environmental suitability over a long service time. The TRL of seabed pumped hydro energy storage is estimated to be 4-6. 3.1.3.

Could Subsea energy storage be an enabler for 'floating offshore wind + hydrogen'?

Subsea energy storage remains the weakest link in the integration of 'floating offshore wind + hydrogen + subsea energy storage' due to the relatively low TRLs. Subsea energy storage could be an enabler for 'floating offshore wind + hydrogen', however, it is not the only option.
