

Is reliable energy the key to sustainable growth in Liberia?

The World Bank today released the fifth edition of its annual Liberia Economic Update, titled Powering Growth with Reliable, Affordable, and Sustainable Energy Access. The report offers a comprehensive analysis of recent economic developments in Liberia, underscoring the crucial role of reliable energy in fostering sustainable growth.

What is happening in Liberia's energy sector?

The update highlights key advancements in Liberia's energy sector, including notable progress in power generation and the expansion of energy access. However, despite these gains, the country faces significant power shortages, calling for substantial investments to achieve reliable, affordable, and sustainable energy access for all Liberians.

What are the opportunities for energy access in Liberia?

Additionally, adopting off-grid and mini-grid solutions presents another opportunity for energy access in Liberia. Given the challenges of extending the central grid to remote areas, off-grid and mini-grid systems offer cost-effective alternatives. Some of the energy sources utilized in Liberia are summarized in Table 3.

How can Liberia improve its energy mix?

Overcoming these challenges requires strategic energy mix diversification through increased utilization of indigenous renewable resources such as solar and biomass energy. These resources hold immense potential, with Liberia boasting abundant solar irradiation and promising bioenergy in specific regions.

Does Liberia have a good energy situation?

Efforts have been made in recent years to improve Liberia's energy situation. Yet, significant challenges, including financial constraints, inadequate infrastructure, affordability issues, and an outdated energy policy, continue to hinder progress.

Does Liberia's energy strategy extend beyond its borders?

The outcomes of this study, elucidating Liberia's energy dynamics and strategies, extend beyond its borders, offering pertinent recommendations for researchers, planners, and engineers in analogous regions globally.

A not-for-profit utility cooperative from Texas has been awarded a contract to electrify a community in Liberia with a solar-plus-storage microgrid, to benefit around 400 ...
