

Does Liberia have a good water supply?

Liberia has abundant water resources throughout the country. Water availability per capita is the third highest in Sub-Saharan Africa at 49,028 m<sup>3</sup> and is significantly higher than the Falkenmarki threshold for water stress. Water abstractions are also quite low. The ratio of water withdrawals to renewable supply is less than one percent.

How did the Civil War affect water and sanitation services in Liberia?

The civil war significantly undermined the delivery of water and sanitation services. Liberia's first Poverty Reduction Strategy (PRS1) indicates that safe drinking water coverage fell from 37 percent in 1990, to 17 percent at the end of the war in 2003, rising to 25 percent in 2008.

Does Liberia have a water and sanitation budget?

While Liberia set out its water and sanitation targets in the PRS1, current institutional and human resource capacity at all levels (national and country) challenge translating these into services. Even where they are available, the lack of operational budget means that Source: CSO2 scorecard.

What are the water resources of Liberia?

Liberia has abundant water resources distributed across 15 key river basins. Many of Liberia's key rivers originate in the Guinean highlands. Groundwater is not well mapped or studied, but most aquifers have low productivity but can be accessed at shallow depths. This section summarizes key characteristics of surface and groundwater resources.

Why is clean water so important in Liberia?

In the wake of Ebola, clean water, decent toilets and good hygiene are more vital than ever. Liberia is one of the world's wettest countries, but it lacks vital networks to reach everyone with clean drinking water. The country's history is shaped by two devastating civil wars, both of which wiped out water and sanitation infrastructure.

Do Liberians have access to safe water and sanitation services?

All in all, less than 10 per cent of Liberians have access to safely managed drinking water and sanitation services, according to the JMP 2017. Securing access to safe water and adequate sanitation for all would go a long way in reducing infection, disease and death.
