

Can long-duration energy storage improve energy security?

The Committee's report on long-duration energy storage concludes that the Government must act fast to ensure that energy storage technologies can scale up in time to play a vital role in decarbonising the electricity system and ensuring energy security by 2035. Long-duration energy storage can reduce curtailment of renewables and grid congestion.

What is long duration energy storage?

Long duration energy storage is defined as a technology storing energy in various forms including chemical, thermal, mechanical, or electrochemical. These resources dispatch energy or heat for extended periods of time ranging from 8 hours, to days, weeks, or seasons. Long duration energy storage is critical for decarbonizing the energy sectors.

What is long-duration energy storage?

Long-duration energy storage can reduce curtailment of renewables and grid congestion. This can bring down electricity costs and allow a greater amount of cheap renewable power to be integrated into the system.

Does the UK need long-duration energy storage?

Long-duration energy storage is critical for ensuring the UK can have both, so it must be a key priority for the Department. The Government says it wants to deploy enough storage both to balance and to decarbonise the electricity system by 2035, but we are not on track.

Should the UK invest in a strategic reserve of electricity storage?

A strategic reserve of electricity storage is a critical investment to secure the UK's energy supply against future shocks, but the Government is still equivocating over whether it is necessary to invest in one. Since 2023, the Government has had a Department for Energy Security and Net Zero.

How long does it take to build a long-duration energy storage facility?

Long-duration energy storage facilities can take 7-10 years to build, so action is needed now to ensure the private sector sees a clear case to invest and to slash planning delays and grid connection queues if we are to have the required infrastructure in place by 2035.
