Are airtight electrical boxes required?

Article 314 in the National Electrical Code, "Outlet, Device, Pull and Junction Boxes," includes no mention of airtight box requirements. What are the air-sealing electrical box requirements?

Air-sealing electrical box requirements are found in the IRC: Table N1102.4.1.1 (R402.4.1.1). Under the electrical/phone box on exterior walls section, the code states: The air barrier shall be installed behind electrical and communication boxes. Alternatively, air-sealed boxes shall be installed.

Why do electrical boxes need to be air sealed?

Air contains at least some water vapor, so by air-sealing the electrical box, we were also reducing the amount of water vapor that could potentially enter a wall or ceiling. The term vapor tight was partially right.

How do you make a house airtight?
