

What type of energy storage system is used in Malta?

Clean,co-generated steam is used for district heating or industrial use. Malta's electro-thermalenergy storage system is composed using components with a long and proven record in the field. Molten salt is the most mature technology used in thermal storage.

What is electro-thermal energy storage in Malta?

Malta's electro-thermal energy storage system is built upon well-established principles in thermodynamics. When charging (taking electricity from the grid) the system converts electricity to heat,in molten salt,and as cold in a chilled liquid. In these forms,this energy can be efficiently stored for long durations.

How secure is Malta's energy supply?

The security of Malta's energy supply is a key area of focus for us. Being a small island, Malta has a small electricity supply system and only a single electricity supplier (Enemalta plc) and depends heavily on imported energy sources. Malta also has no natural gas pipeline interconnection with neighbouring countries.

How has Malta changed its energy mix?

In recent years, Malta has transformed its energy mix used for electricity generation from one based on heavy fuel oil and gasoil to a more sustainable combination of natural gas, electricity imports via the Malta-Italy subsea connection, and increased use of renewable energy sources.

How does a heat engine work in Malta?

When discharging (injecting electricity into the grid) the system operates as a heat engine,combining the stored heat and cold together to generate electricity. Because a heat engine is driven by a change in temperature (T) the extraction of cold as well as heat makes the Malta system more efficient than other technologies.

Does Malta use commodity antifreeze?

Malta uses commodity antifreezeto store liquid at below-freezing temperatures. Antifreeze solutions are commonly used as heat transfer fluids,making them some of the best-understood liquids in the energy sector. All materials and components used in Malta's system are fully recyclable and can be reclaimed after use.
