

What is a hydrogen storage tank?

Hydrogen storage tanks come in quite a variety. Each is suited for different tasks, but at the end of the day, they serve the same purpose: the safe and effective storage of hydrogen gas. A compressed hydrogen storage tank is any tank designed to contain compressed hydrogen gas. As such, this type of tank spans from type I to type IVs.

What materials are used in hydrogen gas storage tanks?

Hydrogen gas storage tank material varies depending on their type. As the types progress, more advanced materials are required to accommodate increasing pressure from 175 bar to 1000 bars. Due to the diversity in the materials found in hydrogen storage tanks, there is some debate over whether to use metal or plastic tanks.

What is a type 1 hydrogen storage tank?

Type 1's are typically made of all metal, and therefore the heaviest of the basic hydrogen storage tanks. As such, they are often used for stationary storage. Type 2's, meanwhile, are often made of similar metal material as type 1s and the stored hydrogen to cylinder mass ratio is low.

What type of storage tank is used for hydrogen liquefaction?

Storage is at low pressures so rather thin and cheap storage tanks can be used. In the liquid form hydrogen is non-corrosive and stainless steel and aluminum alloy vessels with sufficient insulation are used for the cryogenic storage. However, the cost of liquefaction is high so is the energy used for the liquefaction [1,9,18].

What are material-based hydrogen storage technologies?

Despite the relatively low technology readiness level (TRL), material-based hydrogen storage technologies improve the application of hydrogen as an energy storage medium and provide alternative ways to transport hydrogen as reviewed in Sections 2.4-2.6.

What are the different types of hydrogen storage?

Different types of hydrogen storage. 2.1. Review of physical-based hydrogen storage 2.1.1. Compressed gaseous hydrogen Compressed gas storage entails decreasing the volume of the gas while, increasing pressure to fit the gas into a storage medium.
