

The Ryobi PTS01K runs on an 18V ONE+ battery system and was able to perform 38 continuous crosscuts on 5/8" plywood using a single 4Ah battery during testing. Its track slot maintained ...

Will 1/2" MDF strong enough to be upper kitchen cabinets? As plywood prices skyrocketed, I have to change my strategy from using 3/4" plywood for upper and lower cabinets to MDF. I'm worry ...

Safety: The weight capacity of your kitchen cabinets is determined by the cabinet material and how it was constructed. If you exceed the weight capacity, the cabinet could become unstable ...

I work for a commercial cabinet manufacturer and we use 5/8 MDF for laminated products. 3/4 is perfectly fine for an unlaminated project - old school builders made almost all home ...

We use domestic birch 3/4 for finished ends. Import for everything else. Import birch veneers have been shitty for some years now. Our Domestic is about \$85ea compared to \$35 for import. ...
