

What is a micro auto gasification system?

Terragon's novel Micro Auto Gasification System, or MAGS™, is the world's most compact, efficient and environmentally safe technology for the conversion of a variety of combustible materials into thermal energy for use by the site where these materials are generated.

What is Terragon's micro auto gasification system?

Terragon's Micro Auto Gasification System is a novel energy appliance fueled by waste. Safely convert your solid waste and sludges onsite to recover valuable energy. Terragon's Wastewater Electrochemical Treatment Technology purifies oily water, grey water or black water for onsite recovery of clean water or safe discharge to the environment.

How does auto gasification work?

The hot gas re-circulates through the appliance to maintain the elevated temperature needed to continue the gasification process, hence Auto Gasification. MAGS is an energy generating device that is fuelled by waste, and as a result produces approximately 100 kW of thermal energy for use by the site where it is located.

How does Terragon auto gasification work?

In Terragon's proprietary Auto Gasification process, the synthesis gas is used as the fuel for the process. Thus, the waste is converted to inert carbon products by "cooking it" and using the vapours generated from the "cooking" as the fuel for the process. MAGS™ is USDA approved by APHIS as a technology for handling Regulated Garbage.

What are the advantages of gasification technology?

In addition, gasification technology is highly suitable to recover the thermal energy from the process. Eliminates disposal costs for hazardous organic waste. Recovers 100 kWh

Terragon has developed the Micro Auto Gasification System, or MAGS™, which is a compact, efficient and environmentally safe technology for the conversion of waste into thermal energy ...

----- Abstract A compact, container express (CONEX)-housed waste to energy unit, Micro Auto Gasification System (MAGS), was characterized for air emissions from burning of types of military waste as a preliminary characterization of potential gasification emissions. The MAGS unit is a dual chamber gasifier with a secondary diesel-fired combustor.

Voici les nombreux services &#224; votre disposition pour faciliter vos d&#233;marches avec les diff&#233;rents d&#233;partements et services de la communaut&#233; de Saint-Barth&#233;lemy. Par sa simplicit&#233; d'utilisation, notre nouveau portail r&#233;pondra assur&#233;ment &#224; vos besoins.

Les micro-cr&#232;ches proposent un accueil r&#233;gulier ou occasionnel, &#224; temps plein ou &#224; temps partiel pour les enfants de 10 semaines &#224; 4 ans. La dimension familiale de la cr&#232;che offre un cadre chaleureux et s&#233;curisant, permettant ainsi aux enfants ...
