

Can a minecart have infinite storage?

Through the use of minecart cramming, infinite storage is possible. If you build one using the schematic on the right, don't forget to put a rail on top of the lower hopper so you can place as many hopper minecarts as you like on it to expand storage capacity. For the minecarts not to spill, it is important to place blocks to both ends of the rail.

How do minecarts work?

Minecarts "bounce" off of obstructions on the track. Running into a player, mob, or a stopped cart causes it to reverse direction, even on a powered track. Please see the individual pages for each type of rail for information on their properties and basic usage:

How fast can a storage minecart move?

The optimal pattern to make storage minecarts move quickly is 3:1 (1 powered rail every 4th block). Compared to shorter intervals, the reduction in speed is minimal. The widest possible interval seems to be 8:1 (power every 9th block) -- any longer, and the minecart does not reliably reach its destination.

How does a minecart dispenser work?

A dispenser replaces the solid block behind the last powered rail. The dispenser launches the minecart just like the solid block, but creates a convenient place to store extra minecarts. To activate, use the button behind the dispenser to cause a minecart to pop onto the rail, ready for use.

What are the properties of a minecart?

The following are the most important properties of minecarts. Minecarts move at 8 m/s at top speed on a straight track. On a diagonal track they move at $11.314 \text{ m/s} = \sqrt{2} * 8$. Minecarts move differently depending on their load. A minecart with a player inside travels 309m from full speed, staying at full speed for 176m.

How many stacks does a chest minecart have?

As they only flow one by one, different items will only flow out after all of the "same" items are out. This system has a basic capacity of 118 stacks plus 27 stacks per chest minecart added, so it is very useful for storing items you have plenty of, like stone, or for mob farms to store drops like bone or mob armor.
