

Which utility-scale energy storage options are available in Oman?

Reviewing the status of three utility-scale energy storage options: pumped hydroelectric energy storage (PHES), compressed air energy storage, and hydrogen storage. Conducting a techno-economic case study on utilising PHES facilities to supply peak demand in Oman.

What will Oman's new energy policy mean for the energy sector?

The move - a first in Oman's power sector - will help support the large-scale adoption of renewable energy resources for electricity generation, as well as accelerate the decarbonization of the electricity sector, according to a key executive of the state-owned entity - a member of Nama Group.

Will Oman be able to generate electricity from natural gas?

Based on recently awarded bid prices in the region, utility solar PV and wind are likely already competitive with electricity generation from natural gas in Oman. The IEA report's analysis indicates that Oman can cost-effectively achieve its targets of renewables reaching 20% of the country's electricity mix by 2030 - and 39% by 2040.

Does Oman have a power sector?

In 2015, Oman committed to an unconditional 2% emissions cut by 2030 at the United Nations Climate Change Conference. This target is to be achieved through reduction in gas flaring and increase in the utilisation of renewable energy (Carbon Brief 2016 ). The third challenge of the power sector in Oman is supply mix.

Does Oman have a Hydrogen strategy?

Oman has extensive expertise in handling and exporting both LNG and ammonia that is directly applicable to renewable hydrogen and hydrogen-based fuels. Oman is implementing concrete measures to achieve its ambitious targets. In 2022, the government established an independent entity, Hydrogen Oman (HYDROM), to lead and manage its hydrogen strategy.

What is Oman's new PV policy?

Recently, the government in Oman introduced new policy that encourages the residential sector to install photovoltaic (PV) cells on their rooftops. This is expected to have more energy produced from PV in the future, which will be fed back to the grid.
