Are lead-free ceramics a good energy storage material?

Mingxing Zhou, Ruihong Liang, Zhiyong Zhou, Shiguang Yan, Xianlin Dong. Novel Sodium Niobate-Based Lead-Free Ceramics as New Environment-Friendly Energy Storage Materials with High Energy Density, High Power Density, and Excellent Stability.

What is the energy storage density of NBT-SBT (Ref 18) ceramic?

To experimentally realize this concept, we chose the NBT-SBT (ref. 18) composition as an example since a randomly oriented ceramic made from a similar composition was reported to exhibit a high energy storage density of approximately 10 J cm -3, which is one of the highest values among all reported dielectric ceramics 19.

What is the discharge energy density of NBT-SBT multilayer ceramic?

At room temperature (25 °C),the discharge energy density of the <111>-textured NBT-SBT multilayer ceramic is 18.7 J cm -3,which is similar to that measured with the P - E loop (~21 J cm -3). The slight difference is thought to be related to the different time scales of the two measurements (P - E loop,10 -1 s; discharge measurement,10 -5 s).
