

How is Nepal driving rural electrification through off-grid renewables?

With more than 6,000 rivers and tributaries and 300 days of sunshine a year, Nepal has been driving rural electrification through off-grid renewables, specifically with small-scale hydropower and solar home systems.

Can off-grid solar PV be a game-changer for rural electrification in South Asia?

Off-grid solar PV emerges as a game-changer for rural electrification and a catalyst for sustainable agricultural development in South Asia. Governments and development agencies can prioritize investments in solar PV systems to address energy poverty and boost agricultural productivity.

## 1. Introduction

Are solar PV systems viable alternatives for rural electrification in Nepal?

Bhandari (2011) underscores the reliability of solar PV systems as viable alternatives for rural electrification in Nepal, particularly given the country's challenging topography and low population density.

Are off-grid solar PV systems feasible in South Asia?

These findings align with Baurzhan and Jenkins and Sun et al., who explored the feasibility of off-grid solar PV systems in South Asia, emphasizing factors like cost-effectiveness, affordability, financing, environmental impact, and poverty alleviation.

Does off-grid solar PV improve rural energy access?

In this regard, the first model analyzes whether off-grid solar PV improves rural energy access, measured by electrification rates. Our results reveal a significant positive impact, demonstrating the potential of solar PV in addressing energy deficits. The second model investigated the link between rural electrification and agricultural production.

Are solar home systems a viable alternative to the National Grid?

Renewable energy, like solar home systems (SHS), can fuel both economic growth and agricultural development, tackling the dual challenge of limited resources and poor energy access [82,80]. Notably, SHS outperform the national grid in service quality, making them a potent solution (Groh et al., 2016).

**Objective:** To increase the supply of solar electricity and reduce CO<sub>2</sub> emissions through investments in on-grid (solar rooftop systems) and off-grid (solar irrigation pumps, solar mini ...
