

How does the solar energy calculator work in New Zealand?

This calculator estimates the solar energy that can be collected by a solar capture device (solar panel) at a given address, panel direction and roof slope within New Zealand. The program combines an image of the local landscape with irradiance data from the nearest climate station. This is typically more than 10 years of "sunlight hours" data.

What is the average solar power system size in New Zealand?

The average residential solar power system size in New Zealand is 4kW. A 4 kW system consists of between 11 and 14 solar panels, dependent on the size of the panels. Commercial: Commercial sized systems typically start at 10kW (for instance, a small convenience store) and up to 150kW for a large big-box store.

Which roof angle should a solar panel be installed in NZ?

NZ's Ultimate Solar Savings Calculator A quick, easy to use solar calculator with detailed results! Any roof angle (except from the south) can be used for solar panel installations. North facing solar panels are preferable as they generate more power.

What size Solar System do I Need?

For the average household, a 3kW system is the most common choice. Tell me about selecting the right system size. This is your total investment cost to install solar energy. In addition to the price of the system itself, you should also include any additional costs such as installation and Council building consents.
