

Does Luxembourg need a new electricity infrastructure?

Luxembourg aims to cover over a third of 2030 electricity demand with renewables, mostly through variable renewable energy (VRE) from PV and wind generation. The share of VRE generation in imported electricity is also expected to increase significantly. Taken together, these factors will require substantial investment in electricity infrastructure.

What is Luxembourg doing to ensure a secure supply of electricity?

The IEA report notes that Luxembourg is undertaking actions on several fronts to ensure a secure supply of electricity. The country is aiming to increase domestic electricity generation to cover one-third of national demand by 2030, mostly from solar PV and wind.

Is Luxembourg a good place to invest in energy?

This is especially true for the transport sector, which in 2017 accounted for 54% of energy demand and 65% of non-ETS GHG emissions. 1 Luxembourg's low cost of energy and the high purchasing power of its consumers are also a barrier, as they limit interest to invest in renewables and energy efficiency.

Votre confort &#224; l'int&#233;rieur A l'aide de vos mesures &#224; l'int&#233;rieur, vivez dans une maison plus saine, mesurez la temp&#233;rature, l'humidit&#233; et le co2. A&#233;rez qu
