

His research interests are raw materials, sustainability issues, new principles for energy storage and the synthesis and investigation of related materials. Kristina Edström is professor of Inorganic Chemistry at Uppsala University Sweden ...

New carbon material sets energy-storage record, likely to advance supercapacitors November 22 2023, by Dawn Levy Conceptual art depicts machine learning finding an ideal material for ...

Constructed from cement, carbon black, and water, the device holds the potential to offer affordable and scalable energy storage for renewable energy sources. Two of humanity's most ubiquitous historical materials, ...

Electrochemical energy storage technologies have a profound influence on daily life, and their development heavily relies on innovations in materials science. Recently, high ...

Nanomaterials have the potential to revolutionize energy research in several ways, including more efficient energy conversion and storage, as well as enabling new technologies. One of the most exciting roles for ...

However, the theoretical specific energy of graphite is 372 mA h g^{-1} (with LiC₆ final product), which leads to a limited specific energy. 69,70 For a higher energy density to cater for smaller ...

New materials hold the key to fundamental advances in energy conversion and storage, both of which are vital in order to meet the challenge of global warming and the finite ...

However, research and development of new energy materials are not as aggressive as they should be to meet the demands of climate change. There are two major obstacles to the clean energy transition. ... too high. As ...

Guided by machine learning, chemists at the Department of Energy's Oak Ridge National Laboratory designed a record-setting carbonaceous supercapacitor material that stores four times more...

1 Introduction. Global energy consumption is continuously increasing with population growth and rapid industrialization, which requires sustainable advancements in both energy generation and energy-storage ...

The main efforts around energy storage have been on finding materials with high energy and power density, and safer and longer-lasting devices, and more environmentally friendly ways of fabrication. This topic ...

This review takes a holistic approach to energy storage, considering battery materials that exhibit bulk redox reactions and supercapacitor materials that store charge owing to the surface processes together, because ...

A multi-institutional research team led by Georgia Tech's Hailong Chen has developed a new, low-cost cathode that could radically improve lithium-ion batteries (LIBs) -- ...
