

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

Could a new gas project strand a stranded asset in the Western Balkans?

Gas projects currently in development in the Western Balkans could therefore represent billions of euros in potential stranded assets. In the near term, new fossil power in the region would further challenge accession efforts to the EU.

Will new gas infrastructure help the Western Balkans?

New gas infrastructure could increase the Western Balkans' exposure to the volatile prices and gas shortages experienced by much of Europe last year-- perhaps the last thing the region needs, after a year in which it faced a "quadruple energy crisis" sparked by factors independent of Europe's gas shortage.

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil ...

The new battery manufacturing plant will create 755 jobs, with BMZ Group developing and manufacturing high-tech battery systems for a range of applications including medical, industrial, mobility and energy storage. The ...

1 ???· The EBRD's loan of up to EUR4 million to NLB Bank AD Skopje will support energy-efficiency investments by homeowners, housing collectives, producers and service providers. ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel-based power generation with power ...

September 7, 2023: The BMZ Group announced plans on September 5 to build a new production plant in North Macedonia. The Germany-headquartered lithium battery systems firm has started work on a greenfield site in the Skopje 2 ...

The base ITC rate for energy storage projects is 6% and the bonus rate is 30%. The bonus rate is available if the project is under 1MW of energy storage capacity or if it ...

In response to the issues of safe operation and capacity expansion caused by distributed photovoltaic and increasing power load in county distribution station, an energy storage (ES) ...

2 ???#0183; Flatland Energy Storage Project is set to provide significant benefits to the local regional economy, with a capital investment of over \$271 million, and an additional \$7 million ...
