How can wind turbines improve the energy system in Saint Lucia?

In addition to energy storage systems, demand response and frequency support from wind turbines can also be used to maintain system stability in the presence of high renewable generation. The two studies completed on the Saint Lucia electricity system are described in more detail below.

How can smart charging benefit the electricity grid in Saint Lucia?

If smart charging approaches are utilized, the introduction of electric vehicles in Saint Lucia can benefit both LUCELEC and the electricity grid by providing additional storage resources and increasing total consumption of electricity without increasing the peak load.

How can energy efficiency programs be implemented in Saint Lucia?

Energy efficiency program implementation-- Deploying a program to encourage cost-effective energy efficiency across different customer groups in Saint Lucia requires funding, staff, and appropriate regulations. If energy efficiency measures are not adopted, electricity loads will remain higher than projected.

How do you finance a PPA project in Saint Lucia?

The financial begins by securing concessionary financing (from the World Bank or from the United States). For large investment projects such as this one, securing low-cost capital can greatly reduce the resulting PPA price and benefit Saint Lucians through lower electricity prices.
