

When was the first energy storage system installed in Nicosia?

The first energy storage system,30 kW/50 kWh,was connected to the electricity system in Nicosia in 2018. Cyprus became the testing ground for an innovative community project delivered by a German electric utility company Autarsys,where 30 kW/50 kWh was connected to a conventional distribution substation in Nicosia.

What is a 'powerbank' in Nicosia?

There is a drive to increase use of battery systems,to store excess energy and create a 'powerbank'. The first energy storage system,30 kW/50 kWh,was connected to the electricity system in Nicosia in 2018.

What are the benefits of large-scale electrical energy storage systems?

Certainly, large-scale electrical energy storage systems may alleviate many of the inherent inefficiencies and deficiencies in the grid system, and help improve grid reliability, facilitate full integration of intermittent renewable sources, and effectively manage power generation. Electrical energy storage offers two other important advantages.

Is Cyprus ready for full electricity market liberalisation?

Currently,Cyprus is in a transitional step before full electricity market liberalisation,which is being driven by the binding timetable of the Cyprus Energy Regulatory Authority (CERA) to ensure the full opening up of the energy market and granting consumers the right to choose their own supplier.

Is a 10 MWp photovoltaic park in Nicosia a blockchain project?

Meanwhile,the University of Cyprus (UCY) is developing a 10 MWp photovoltaic park inside the United Nations buffer zone in Nicosia,supported by European funds. The first stage of the project will include 5 MWp of PV capacity with 2.35 MWh of battery storage,with plans to conduct testing for a blockchain program.

What are the advantages of electrical energy storage?

Electrical energy storage offers two other important advantages. First,it decouples electricity generation from the load or electricity user,thus making it easier to regulate supply and demand. Second,it allows distributed storage opportunities for local grids,or microgrids,which greatly improve grid security,and hence,energy security.
