

Do Ni MH batteries have energy storage characteristics?

The Ni-MH batteries were tested for battery energy storage characteristics, including the effects of battery charge or discharge at different rates. The battery energy efficiency and capacity retention were evaluated through measuring the charge/discharge capacities and energies during full and partial state-of-charge (SoC) operations.

Can hydrogen storage alloy coatings be used to design electrodes in NiMH batteries?

(3) The low-temperature discharge capacity of the synthesized anode remains on par with the pristine AB 5 alloy at 230.4 mAh/g in a -40 °C environment. This research presents a significant advancement in hydrogen storage alloy coatings and offers valuable insights for designing electrodes in NiMH batteries. Chu, S.; Cui, Y.; Liu, N.
