

What is the best way to store liquid nitrogen?

To reduce the risks described above, safety and insulation are crucial for storing liquid nitrogen. However, the best way for the cryogenic liquid to be stored depends on its purpose. These are the most well-known liquid nitrogen storage devices: Large-scale liquid nitrogen storage uses cryogenic storage tanks.

Why is nitrogen stored in a tank?

For example, in hospitals, nitrogen is often stored in tanks to support medical gas systems, ensuring a continuous supply of essential equipment such as ventilators or cryogenic storage. In general, nitrogen is stored in its liquid form which calls for cryogenic needs. Fig. 1 below shows some typical nitrogen tanks.

How dangerous is liquid nitrogen storage?

Liquid nitrogen storage comes with several safety risks: A first risk is pressure build-up in the tank or container and the subsequent danger of explosion. If the cryogenic liquid heats up due to poor insulation, it becomes gaseous.

How much liquid nitrogen does a storage tank lose a day?

If an infrastructure leaks or the insulation is inadequate, liquid nitrogen loss can be as high as tens of liters per day. If the storage tank is large, this may not be noticeable, but there will soon be nothing left when smaller containers are used. Most applications that use liquid nitrogen depend on high-grade cryogenic liquid.

How to choose a nitrogen storage tank?

For instance, laboratories might need smaller, portable cylinders, whereas industrial applications might require larger bulk storage tanks. Volume Requirements: Estimate the amount of nitrogen you need on a daily, weekly, or monthly basis. This helps in selecting a tank size that can adequately supply your needs without frequent refills.

How do you store a nitrogen tank?

Storage Environment: Store nitrogen tanks in well-ventilated areas to prevent the accumulation of nitrogen gas, which can displace oxygen and create a suffocation hazard. Keep tanks away from direct sunlight, heat sources, and flammable materials. Securing Tanks: Always secure tanks to prevent them from falling over.
