

How does nanostructuring affect energy storage?

This review takes a holistic approach to energy storage, considering battery materials that exhibit bulk redox reactions and supercapacitor materials that store charge owing to the surface processes together, because nanostructuring often leads to erasing boundaries between these two energy storage solutions.

Can three-dimensional ordered porous materials improve electrochemical storage of energy?

Three-dimensional ordered porous materials can improve the electrochemical storage of energy. Jing Wang and Yuping Wu from Nanjing Tech University, China and co-workers review the development of these materials for use as electrodes in devices such as batteries and supercapacitors.

What is electrochemical energy storage?

Among various energy storage technologies, electrochemical energy storage devices are the most promising and common devices. Currently, research on electrochemical energy storage is mainly focused on supercapacitors and rechargeable batteries 1, 2, 3, 4, 5.

Can graphene-based hybrid nanostructures be used for electrochemical energy storage?

Recent advances in graphene-based hybrid nanostructures for electrochemical energy storage. Nanoscale Horiz. 1, 340-374 (2016). Xu, Z. L., Kim, J. K. & Kang, K. Carbon nanomaterials for advanced lithium sulfur batteries.

What are the limitations of nanomaterials in energy storage devices?

The limitations of nanomaterials in energy storage devices are related to their high surface area--which causes parasitic reactions with the electrolyte, especially during the first cycle, known as the first cycle irreversibility--as well as their agglomeration.

Can nanomaterials improve the performance of energy storage devices?

The development of nanomaterials and their related processing into electrodes and devices can improve the performance and/or development of the existing energy storage systems. We provide a perspective on recent progress in the application of nanomaterials in energy storage devices, such as supercapacitors and batteries.
