

Are battery energy storage systems causing noise?

Image: Wartsila. The noise of battery energy storage system (BESS) technology has "exploded" as a concern in the last six months, an executive from system integrator Wartsila ES&O said. BESS units primarily emit noise from their cooling systems, but balance of system (BOS) components like inverters and transformers also produce noise emissions.

Do cooling fans and inverters cause noise?

During operation, certain equipment, such as cooling fans and inverters, may generate noise, potentially impacting nearby receptors. Assessing the noise generated by these components is vital to ensure compatibility with the surrounding environment.

Do power conversion devices emit continuous humming noise?

Power conversion devices in BESS, like inverters, which transform direct current (DC) to alternating current (AC) for grid integration, also emit continuous humming noise. Efficient conversion processes require stable operating temperatures, increasing the need for effective, but noisy, cooling solutions.

Why does a Bess battery make a loud noise?

In our work with BESS, the noise is commonly associated with the battery and inverter modules' heating and cooling systems, with the use of fans and compressors being the main emitters. However, the noise levels emitted are highly variable and depend on several factors, including operating conditions, ambient temperatures, and speed drives.

Does a 5MWh cooling system increase noise?

Many China-based companies have 5MWh systems in the same space, and Western system integrators like Wartsila and Powin are subsequently responding. More sophisticated cooling systems mean that the noise emissions are not necessarily growing with the increased energy density, however.

Are noise emissions increasing with energy density?

More sophisticated cooling systems mean that the noise emissions are not necessarily growing with the increased energy density, however. Inverter and BESS firm Sungrow pointed out in a recent interview that its latest generation product increased the energy-per-container from 2.5MWh to 5MWh but the max noise emissions went from 79dB to 75dB.
