

Are EV batteries the future of energy storage?

"There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It's the key to turning intermittent wind and solar into a stable energy source," explains Pål Rønde, Head of Battery Norway. An early adopter of electric transport, Norway continues to capture EV battery headlines.

Does Sweden have a 'net-zero' electricity grid?

The electricity grid in both Norway and Sweden is largely decarbonized, thanks mostly to hydropower, plus some nuclear power in Sweden and a growing share of wind generation. At the same time, more and more automakers are announcing some version of 'net-zero' or carbon neutrality targets where they aim to almost fully eliminate CO2 emissions.
