

Does North Korea have a man-portable air defense system?

North Korea has produced and deployed relatively modern man-portable air defense systems (MANPADS) that are intended to engage both aircraft and small, low-altitude targets such as cruise missiles and a large number of towed and self-propelled anti-aircraft guns.

Does North Korea still have a fighter fleet?

Although the modernization of North Korea's air defense network, which for decades has been among the world's densest, is well underway, along with the expansion of its strike capabilities aimed at enemy airfields, the obsolescence of its fighter fleet--even by the standards two decades ago--remains a major outstanding shortcoming.

Could missiles revolutionize North Korea's defense sector?

The appearance of such missiles at a major arms exhibition in 2021 confirmed longstanding speculation that such programs could be the next step for North Korea's defense sector, with these assets having the potential to revolutionize the fighter fleet's capabilities. Background: North Korea's Defense Sector After the Cold War

What is North Korea's most comprehensive short-range air defense suite?

The most comprehensive short-range air defense suite in North Korea to date could be found onboard a new class of naval corvettes that was revealed by state media in August 2023.

Does North Korea have a missile guidance system?

While much remains unknown about North Korea's missile guidance technologies, the capabilities demonstrated by its surface-to-air missiles indicate that the country can likely produce guidance systems for an AAM decades ahead of those of the AAMs it acquired from the Soviet Union in terms of sophistication.

Will North Korea develop air-to-air missiles?

What is possible, however, is that North Korea will seek to leverage its investments in anti-aircraft missile technologies from its new air defense systems to develop air-to-air missiles (AAMs) for its existing aircraft.
